

# Cartridge pressure relief valves type CART

screw-in mounting, direct operated

**CART** are screw-in, direct operated pressure relief valves. They are used to limit the max pressure in the hydraulic systems or to protect part of the circuit from overpressure. They are available in six sizes for different flow and pressure ranges.

The cartridge execution is specifically designed to reduce the dimension of blocks and manifolds, without penalizing the functional characteristics.

Option **RS**, conforms to the Machine Directive (2006/42/CE), with factory preset and lead sealed regulation. The factory pressure setting required by the customer corresponds to the valve's cracking pressure.

Max flow: **150 l/min**  
Max pressure: up to **420 bar**

Max pressure: see section 3)										Only for RS option: <b>280</b> = factory pressure setting to be defined by the customer min step: 1 bar - min pressure setting: 25 bar (example 280 = 280 bar)
										Options: <b>see section 5 for options availability and combination:</b> <b>R</b> = leak free execution (2) <b>RS</b> = leak free execution plus lead sealed regulation conforming to 2006/42/CE Manual override only for standard and /R option (3): <b>V</b> = regulating handwheel <b>VF</b> = regulating knob <b>VS</b> = regulating knob with safety locking

For **PED** version see technical table CY010

(1) Available also in stainless steel execution, see technical table CW010

(2) Standard execution of CART M-4 and CART ARE-20 provides the leak free feature, then the /R is always present in the valve model code, with the exception in case of RS options

(3) For handwheel and knob features, see sections 7), 8). For their availability see section 5)
